

Detsafe 8L - Detonator Container

Detsafe 8L

Detonators are an essential tool for many military, civil and humanitarian applications. They are however very sensitive items and so, great restrictions are placed on their conditions of storage and transportation.

The Detsafe 8L is one a family of units that have been designed to provide safe handling of detonators. Should a detonator initiate by accident in one of the internal moulded chambers, there will be no consequential initiation of detonators in neighbouring chambers or any effects outside of the Detsafe itself.

Designed to be compliant with UN Hazard Classification of 1.4S

Key Features:

Based on a NATO standard ammunition box. Body stretched and strengthened.

8 Internal moulded chambers. Can take a full load of 24 detonators

Chambers available with cardboard sleeves to meet UN 'Inner Pack' requirement.

Detsafe is fitted with an improved locking mechanism.

Colour can be specified by customer. Standard colour is red.

Height: 380mm Width: 155mm Length: 315mm

Weight: 22kg.

Detsafe 8L, typical electric detonator and fuel fire test used as part of UN certification process
