

Detsafe FR - Detonator Container - Forensic Recovery

Detsafe FR

Detonators are an essential tool for many military, civil and humanitarian applications. They are however very sensitive items and so, great restrictions are placed on their conditions of storage and transportation.

Detonators, when used for criminal or terrorist activity are invaluable forensic evidence but their volatility often means they are destroyed at the scene on safety grounds. The Detsafe FR provides the means to safely remove both commercial and improvised detonators to a suitable location for later examination. The Detsafe FR is designed to move a single detonator in a clean smooth chamber that has room for the bagged detonator and additional padding as required.

Key Features:

Based on a NATO standard ammunition box.
Body stretched and strengthened.

Single large internal chamber.

Internally lined with smooth glass fibre finish.

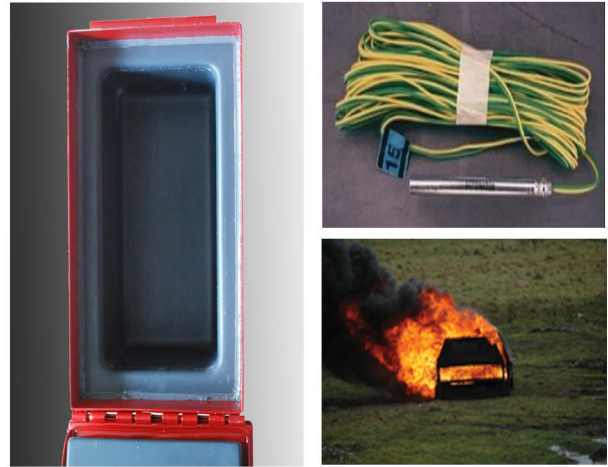

Detsafe is fitted with an improved locking mechanism.

Colour can be specified by customer.
Standard colour is red.

Designed to meet UN Hazard Classification of 1.4S

Height: 210mm Width: 155mm Length: 315mm

Weight: 8kg.
