

Detsafe DC8M - Disruptor Cartridge Container

Detsafe DC8M

Disruptors are a valuable tool for EOD operations. They use powerful cartridges to propel pressurised water at a device to rapidly dismantle the critical elements.

The cartridges are not as volatile as detonators, but should they initiate, they produce a large energetic effect. In an enclosed space or packed in a non-specialist container this can lead to overpressure and fragmentation issues.

The DC8M is configured to contain a mixed array of cartridges, so that the operator has choice for a remote task. The Detsafe DC8M fully contains the effects in the event of even the largest of them firing. This makes the DC8M especially suitable for moving such a working selection of cartridges by road or by air.

The DC8M builds on the proven capability of the Destafe range.

Key Features:

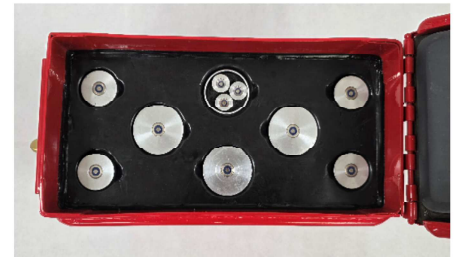

Based on a NATO standard ammunition box. Body stretched and strengthened.

8 Internal moulded chambers

Detsafe is fitted with an improved locking mechanism.

Default colour is red

Height: 335mm Width 175mm
Length: 315mm Weight: 15kg

4x Chambers suitable for Hot Rod/ ABL3000 cartridges or cannister with 3x Needle cartridges.

4x Chambers suitable for Pig Stick / ABL 2000 cartridges.
